

**LAN, Wi-Fi
or CLOUD**
NETWORK CONNECTION

NETLEVEL^o

THE IOT MODULE

Netlevel is a small web server that connects each TLC mixing and flow valve to the local LAN or Wi-Fi network. Devices can then be controlled via smartphone, tablet, desktop computer, or voice control. A smart home with Netlevel provides more comfort, hygiene, and safety when it comes to managing water at home.

If desired, Netlevel can also be connected to the cloud while still maintaining the strictest security standards.

This allows users to draw themselves a warm bath while on their way home or preheat the shower from bed. Users can regularly perform hygienic flushes to keep the pipe system free of bacteria while they are away for longer periods of time.

Each device is displayed in a list in the browser window, allowing the preferred settings to be easily programmed and saved.

NETWORK-CONNECTED

Easy integration of TLC products via LAN, Wi-Fi, or the cloud

BROWSER ACCESS

Available via smartphone, tablet, or desktop computer

VOICE CONTROL

Devices can be operated via a cloud connection using voice control systems such as Amazon Alexa

EASY INSTALLATION

Practical, compact unit
