TWINLEVEL^o TLI Voice

CONTROLLING FIXTURES VIA VOICE CONTROL

TLI Voice is a language interface for TLC mixing and flow valves in the kitchen and bathroom. It integrates the Oblamatik cloud with Amazon Alexa, allowing users to intuitively select and control their fixtures via voice control. Users can tell Alexa to turn the water on or off, make it warmer or colder, or activate their individual hywise profiles.

Controlling fixtures via voice control means that users can keep their hands free and avoid touching the operating controls, which is both more practical and hygienic. TLI Voice requires an active Internet connection.

EASY INTEGRATION

Presently compatible with Amazon Alexa; compatibility with additional services is in development

HANDS-FREE OPERATION

Practical and hygienic fixture use

SIMPLE SKILLS

Turn water on and off, and select temperature, device, and profile

HYWISE-COMPATIBLE

Easy integration into the digital water management system
